

FARMeasy

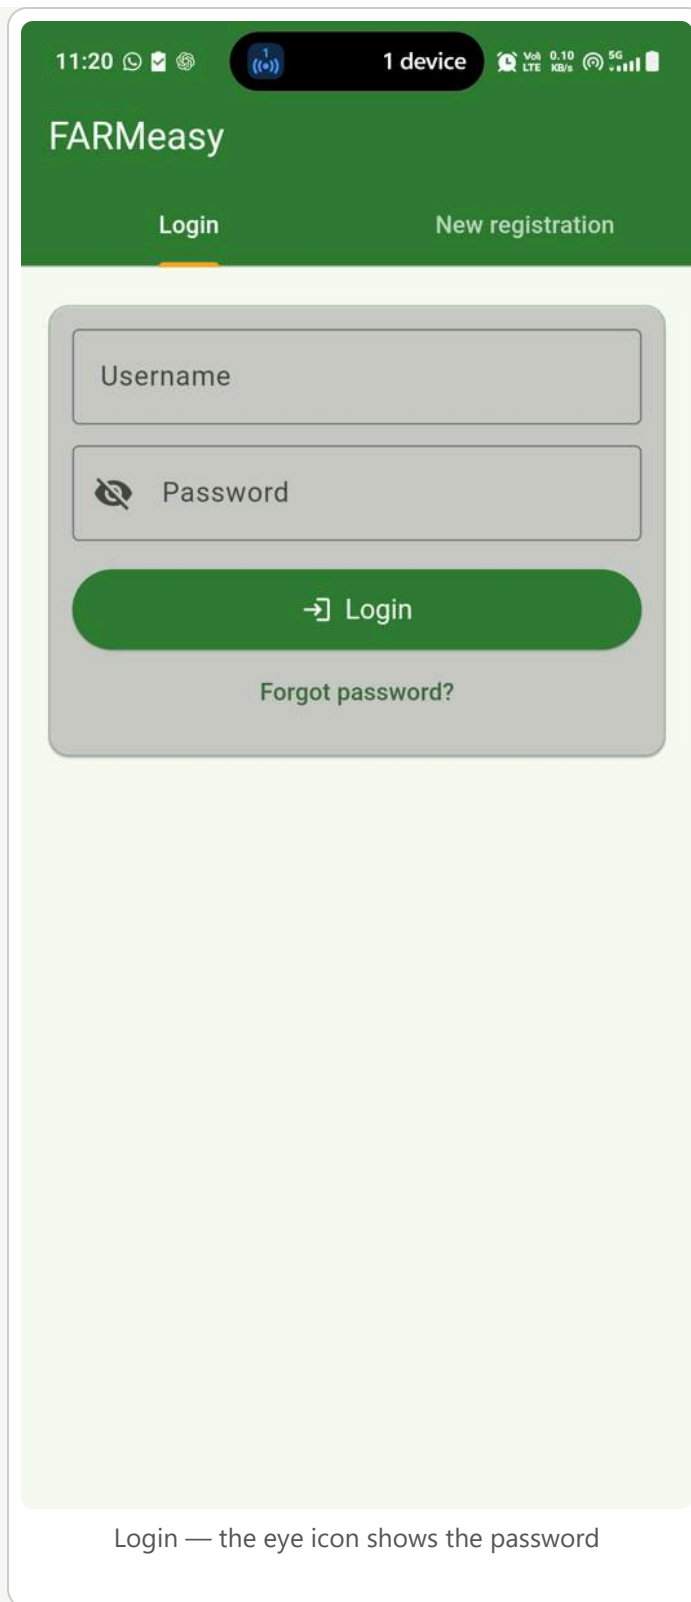

User Guide

Livestock farm record-keeping — by ICAR-IIAB, Ranchi

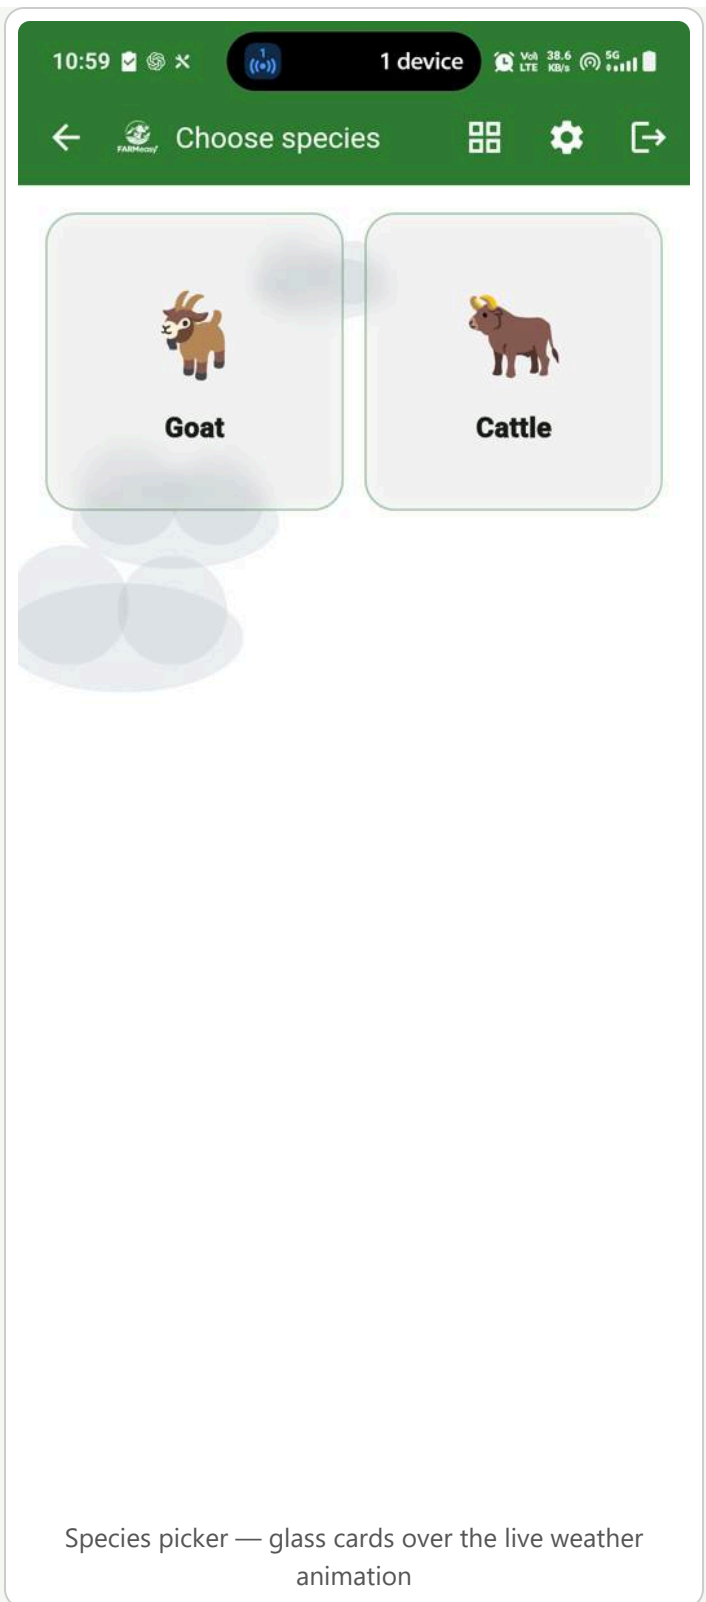

Free to use · Works offline · Syncs with your consent

1. Install & log in

- Download the app (APK) and install it. Allow "Install unknown apps" if asked.
- Allow Notifications (health & weather alerts) and Camera (barcode scanning).
- Tap **Enter** → **Login** with your account, or **New registration** to create one (farm name, owner / in-charge name, species & breeds, consent).
- Shared farm account for the IIAB team: **IIABfarm** (ask the admin for the password) — everyone with these credentials sees the same farm.
- **Using your farm on another phone** (or sharing it with a family member / farm worker): install the app, tap **Login** and enter the same username and password. When asked, sign in with the **same Google account** that holds the farm's sheet — the app finds the farm and downloads its records. Sync at least once from the first phone before doing this.
- Forgot password? Verify with your owner name + registered phone/mail and set a new one.

Login — the eye icon shows the password

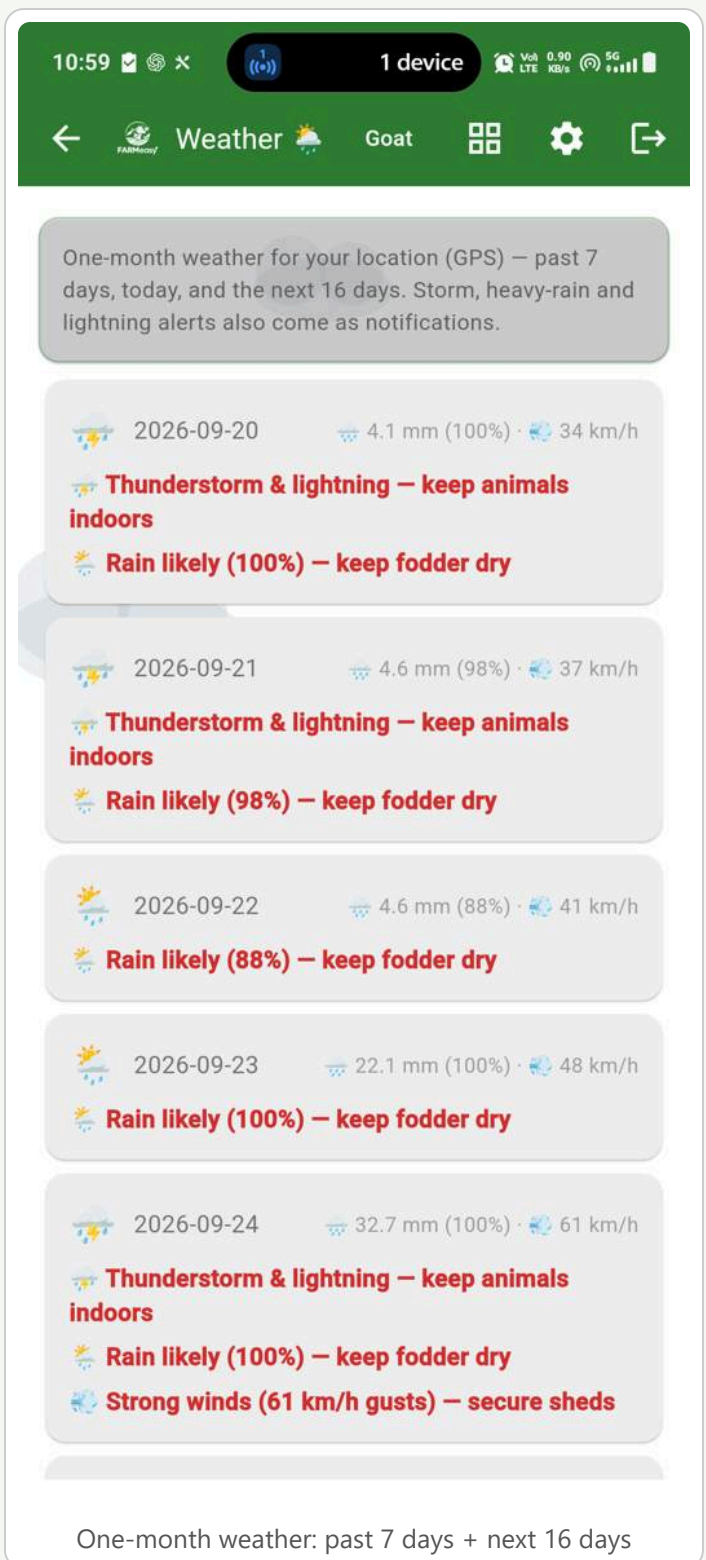

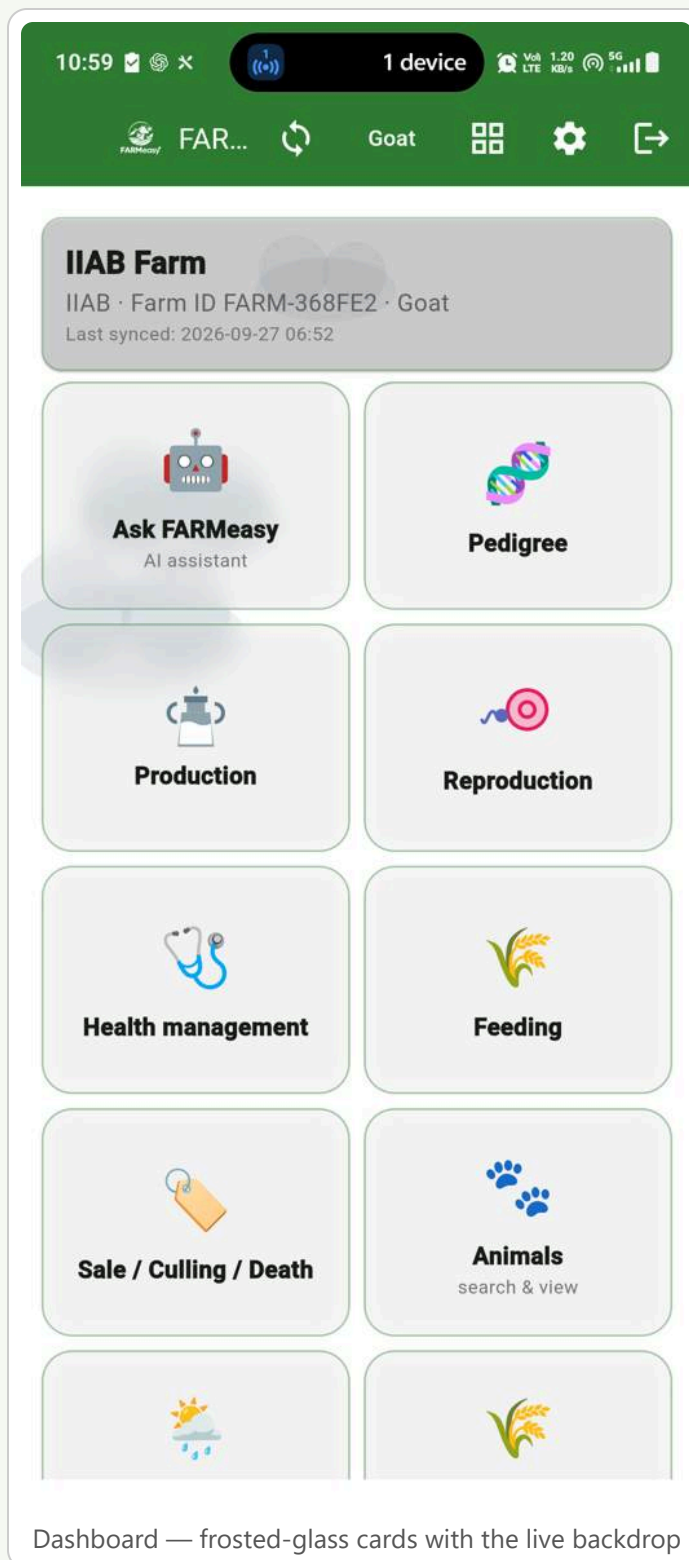

Species picker — glass cards over the live weather animation

2. Dashboard & live weather theme

- Cards: Ask FARMeasy (AI), Pedigree, Production, Reproduction, Health, Feeding, Animals, Weather, Sale/Culling/Death, plus tools: Feed Formulation, Breeding Value, Farm Economics, Export, User Guide and Sync ☁.

- The background follows your local weather — **golden when sunny, grey when rainy/cloudy, blue when windy** — with moving sun, clouds, rain or lightning behind frosted-glass cards.
- Profile ⚙ → Display: separate toggles for the **weather colour theme** and the **animations**.

3. Recording data

- Open a module and fill the form. Dates default to today; required fields are marked *.
- Type a few digits of an animal ID (first, middle or last) — matching animals drop down instantly; sold/culled/dead animals do not appear.
- 🐾 paw icon = pick from your animals with search; 📊 icon = scan the ear-tag barcode.
- Breed lists follow official **NBAGR-registered breeds** per species (cattle also includes HF, Jersey, HF Cross, Jersey Cross).
- Health records with a follow-up date appear in the 🕒 reminder banner on the home page.
- Production auto-computes age (days) from the animal's birth date. Use "Same as previous" for daily routines.

4. Animals & records

- Animals 🐾 — searchable, scrollable list of your herd.
- Tap an animal to see **all its records, table-wise by module with serial numbers** (pedigree, production, reproduction, health, feeding, exits).
- Pedigree → Find relatives shows parents, full/half siblings and other herd members.

5. Ask FARMeasy (AI assistant)

- Ask anything about your farm records — milk totals, pregnant animals, health follow-ups, reproduction status.

- The AI knows today's weather and the app's features, and explains what FARMeasy is if you ask.
- Just tell it data: "I042223001 gave 2.5 litres milk today" → it shows a card; tap it and the right form opens pre-filled.
- IABfarm users: works out of the box. Other users: tap the  icon and add your own API key — OpenAI, Claude, Google (Gemini) or Kimi. The key stays on your phone.

Goat

Ask ...
Goat

Namaste! Ask me anything about your animals or this app — e.g. "How much milk did COW001 give?", "Which animals need attention?", "What is FARMeasy?". You can also just tell me data, like "COW001 gave 8 litres milk today", and I will fill the right form for you.

Which goats are pregnant?

Based on recent pregnancy-diagnosis records, these 9 goats are confirmed pregnant: KID-48, KID-12, KID-18, KID-28, KID-14, KID-23, KID-21, KID-16, and KID-25.

Details noted in the records: KID-18 is carrying 2 male kids; KID-14 is carrying 1 male and 1 female; KID-23 is carrying 1 male; and KID-28 is 2 months pregnant.

Another 11 goats tested Positive but are marked Non Pregnant in remarks: KID-7, KID-10, KID-17, KID-22, KID-15, KID-13, KID-9, KID-30, KID-35, KID-49, and KID-43.

e.g. How much milk did COW001 ...

Ask

Example — "Which goats are pregnant?"

6. Tools

- **Feed Formulation** — daily ration for any body weight (2 kg chicken to 700 kg buffalo), with roughage, concentrate, minerals and feeding notes.
- **Breeding Value** — expected calf BV = sire BV $\div$ 2 + dam BV $\div$ 2.
- **Farm Economics** — milk/egg income vs feed cost from your records and your local prices (saved on the phone).

Feed Form...

Goat

Species

Goat

Body weight (kg) *

25

Physiological condition *

Growing / young stock

Plan ration

Daily ration – Growing / young stock

Body weight **25.0 kg**

Dry matter need **0.75 kg/day**

0.75 kg body-weight allowance

Roughage (as fed) **0.64 kg/day**

Concentrate (as fed) **0.33 kg/day**

Mineral mixture

13 g/day

- Roughage: aim for half green fodder (azolla, hybrid napier, cowpea, silage) and half dry roughage (paddy straw, wheat bhani).
- Divide the concentrate into at least 2 meals (e.g. at milking time); do not feed it all at once.
- Provide 40–60 litres of clean drinking water daily (more in summer and for lactating animals).
- Have the ration verified by a veterinarian / livestock assistant — this is a planning estimate, not a balanced ration.

Feed formulation result

7. Export & sync

- **Export** 📄: pick a species, any modules and a date range → a clean **PDF or Word** report — one proper table per module with a legend — shared via WhatsApp, Gmail, Drive...
- **Sync** ☑ keeps a copy of your farm in **your own Google Sheet**:
 1. Tap ☑ on the home page.
 2. Choose your Google (Gmail) account — any Gmail works. If Google shows "unverified app", tap **Continue**.
 3. Tap **Allow**. FARMeasy can open **only the sheet it creates**, nothing else in your Drive.
 4. A sheet named **FARMeasy — <your username>** appears in your Google Drive, with a Registration tab and a Data tab.

Sync is two-way: it uploads new records from this phone and downloads records entered on other phones logged in to the same farm. After the first time it runs automatically once a day when online; tap ☑ anytime.

- **IIABfarm account:** syncs to the central ICAR-IIAB Google Sheet instead. The first time, enter the account password once when asked.

About & developers

FARMeasy is a free mobile app by **ICAR-IIAB** (Indian Institute of Agricultural Biotechnology), Ranchi, for small livestock farmers. All records live on your phone (works fully offline) and, when you tap Sync, are copied to a Google Sheet in your own Google Drive. No ads, no tracking. [Privacy policy](#).

Development team — Team ICAR-IIAB, Ranchi:
